

Kuros Biosciences's commercial roll-out of MagnetOs bone graft exceeds expectations

June 2, 2021

- MagnetOs U.S. Q1 sales accelerate, rising 117% over Q1 2020
- European distribution network expansion ahead of schedule
- Key commercial events in Australia, UK

Schlieren (Zurich), Switzerland, June 2, 2021 – Kuros Biosciences (SIX: KURN), a leader in next generation bone graft technologies, today provided an update on its commercial activities, with sales of MagnetOs bone graft and progress in establishing distributor networks both exceeding management expectations.

Direct sales of MagnetOs in the U.S. accelerated in Q1 2021, with an increase of 117% over the same quarter in 2020. In Europe, third-party distributor agreements have recently been signed in Spain, Italy, Norway, Sweden, Denmark, and France. These add to existing distributor network agreements in Switzerland and the UK.

The company also made additional marketing inroads in other important territories. In the UK, the company was awarded a major tender to provide Orthopaedic Spinal & Scoliosis Implants, Consumables & Equipment to NHS National Services Scotland, through its UK stocking distributor, Axis Spine Limited. In Australia, the demand for MagnetOs from Kuros' distributor, Connexion Surgical, has surged following a key opinion leader (KOL) meeting co-organized by Kuros and Connexion.

Joost de Bruijn, Chief Executive Officer of Kuros, said: "The enthusiastic takeup and feedback from surgeons on our next-generation bone graft MagnetOs has surpassed our expectations. Delivering this level of progress ahead of budget in the midst of hospital disruptions and travel restrictions imposed by the COVID-19 pandemic is testament to the value of our lead product and the drive of our commercial team."

About MagnetOs

MagnetOs bone graft has an advanced submicron surface topography that leads to the formation of bone in spinal fusion defects rather than scar tissue. In preclinical models, MagnetOs preferentially directs the body's early wound healing response toward the bone-forming pathway, an effect that is so potent that bone can be formed even in soft tissues without the need for added cells or growth factors. This ground-breaking research led to Kuros attaining an osteoinductive claim for MagnetOs in Europe and it is now supported by more than three years of clinical experience since its launch in the United Kingdom in May 2017. Results from in vitro or in vivo laboratory testing may not be predictive of clinical experience in humans. MagnetOs is not cleared by TGA or FDA as an osteoinductive bone graft.

Indications statements

All markets: Please refer to the instructions for use for your local region for a full list of indications, contraindications, warnings, and precautions.

About Kuros Biosciences AG

Kuros Biosciences is a leader in next generation synthetic bone graft technologies for targeted and controlled bone healing. Kuros's bone graft substitute, MagnetOs, is commercialized in the US and UK for use in posterolateral spinal fusions. Kuros's lead product in development, Fibrin PTH, a drug-biologic combination for spinal interbody fusion, has entered a phase 2 clinical trial in the U.S. Kuros is located in Schlieren (Zurich), Switzerland, Bilthoven, the Netherlands and Burlington (MA), U.S.A. The Company is listed according to the International Reporting Standard on the SIX Swiss Exchange under the symbol KURN. Visit www.kurosbio.com for additional information on Kuros, its science and product pipeline.
